

"ELECTRICITY AND VEHICLES: ONE WORLD IN THE FUTURE"

# Spain ready to receive 7 million electric vehicles

**Ricardo Fraguas Poole**

"The generation capacity and infrastructure of the current national grid in Spain can take up to 7 million 100% electric vehicles, today."

They are words of up to a few months, responsible for transport of the Institute under the Ministry of Industry, Energy and Tourism, for the Diversification and Saving of Energy (IDAE) and now Director of Institutional Relations of Nissan Spain, Juan Luis Pla ago.

At the meeting of the International University Menéndez Pelayo held in the Palacio de la Magdalena in Santander, "ELECTRICITY AND VEHICLES: ONE WORLD IN THE FUTURE," Pla said that, according to Iberdrola, the installed generating capacity and national grid You can support today to 7 million electric vehicles without additional investments.

He has also expressed the usefulness of electric vehicles to reduce dependence pertróleo and meet the commitments on reducing emissions.

"Europe spends EUR 1 billion per day on fuel imports for transportation, it is a deficit that we can not afford."

On the west facade of the Palacio de la Magdalena, Nissan has shown the benefits of its two 100% electric vehicles available in the Spanish market, the e-NV200 minivan that, around summer, begins operating as Taxi in Barcelona, and the latest selling LEAF
